Veil page

twig

1. Functionality
   - View sailing boats

php

1. Functionality
   - Search the database for all sailing boats

motor page

twig

1. Functionality
   - View motorboats

php

1. Functionality
   - Search for motorboats

other page

twig

1. Functionality
   - View other boat

php

1. Functionality
   - Search for other boat

login

twig

1. Functionality
   - Displays two forms depending on whether the user wants to log in or want to register

php

1. Functionality
   - Redirects to the home page and the user is logged in

logout

php

1. Functionality
   - Logs out the user

account

twig

1. Functionality
   - Displays the user's personal data in case he wants to change it

php

1. Functionality
   - Searches the database for user information so that it can be displayed to the user so that the user can then modify it as he sees fit

rent

twig

1. Functionality
   - Displays two selected dates that correspond to the rental period

php

1. Functionality
   - Tests the data of the two date fields to be able to automatically and dynamically manage these two fields.

Code Like this

```js
// rent.js
function updateDate(){

    var startDate = document.getElementById('startDate');
    var endDate = document.getElementById('endDate');

    startDate.addEventListener('change', (event) => {
        var start = event.target.value
        var date = new Date(start);
        var dateEnd = new Date(date.getTime() + 86400000);
        var inputEndValue = endDate.value;
        var end = new Date(endDate.value);
        var dateFormat = dateEnd.getFullYear() + "-" + (dateEnd.getMonth() + 1).toString().pad
        endDate.min = dateFormat;
        console.log("tot");
        if (dateEnd < end){
            console.log("toto");
```

```
            endDate.value = inputEndValue;
        } else {
            endDate.value = dateFormat;
        }
    });
  }

  window.onload = function() { updateDate(); };
```

paid

twig

1. Functionality
   - Displays a message if the payment was successful

php

1. Functionality
   - Finds the id of the user who wants to rent and the dates of rental that will be displayed in the page twig

main

twig

1. Functionality
   - Display my main navbar of the site with all the different pages

boat

twig

1. Functionality
   - Displays the boat selected by the user with all its information

php

1. Functionality
   - Search the database for all the information of the selected boat

boats

twig

1. Functionality
   - Affiche tous les bateaux de la base de données suivant le type choisi

rental

twig

1. Functionality
   - Displays all rentals that the logged-in user has made since the creation of his account

php

1. Functionality
   - Search the database for all the locations of the connected user

landing

twig

1. Functionality
   - This page is the home page of my site. From here all the different searches or data filtering can be done and the user will have a more complete view of the site
